

Sustainable Aviation

WHAT WE DO

FlyOnE Sustainable Aviation is making personalised, on-demand or self-piloted, renewable energy powered regional air mobility as accessible to everyone as driving a car. With a growing range of low-cost electric aircraft, a growing range of interconnecting airports and a growing range of training and maintenance partners, more people than ever before will have affordable access to pilot training and aircraft for recreational use and private transport for our regional air mobility future.

INFRASTRUCTURE

FlyOnE is establishing the ground energy requirements for the Air-taxi network of tomorrow. As we continue to offer more electric air services in more regions, we will continue to grow the renewable energy availability at these sites for a complete sustainable aviation solution.

MILESTONES

FlyOnE has completed over 40,000kms flying electric in Australia to date (06/2023)

THE GLOBAL AIR TAXI NETWORK WILL BE WORTH \$1.5 TRILLION GLOBALLY BY 2040 ([LINK](#))

AIRCRAFT

Through our growing network of embedded aircraft, flight training partners, air taxi partners, and service partners, FlyOnE will continue to lead the electric air transport development in Australia and beyond.

Our aircraft import and development projects and our energy capture and supply infrastructure will continue to add value and revenue to the business as we grow to service this growing sector leaving very little room for competitors to offer a better service.

Our culture of customer-centricity and infinite game mindset will see FlyOnE become an institution in this sector. There are still limited opportunities with FlyOnE for equity partnership in this dynamic new frontier.
